

1574568 - SAP NetWeaver Gateway 2.0 - Known Constraints

Version: 54 | Validity: 20.07.2010 - active | Language: English (Netherlands) | Compare versions | 1000% | Download

Content: Summary | Header Data | History | References

Symptom

THIS SAP Note outlines the constraints applicable to SAP NetWeaver Gateway 2.0.

Other Terms

CRU-DW

Reason and Prerequisites

These constraints apply in addition to the requirements and constraints described in the SAP NetWeaver Gateway 2.0 documentation on <http://help.sap.com/requirements>.
For more information about SAP NetWeaver Gateway 2.0, see SAP Note 1580185.

Solution

Read carefully and act accordingly.

This SAP Note contains several sections:

- General constraints: these apply to SAP NetWeaver Gateway as a whole.
- constraints for the software component versions sw_mw 140 and sw_comp 100 that are available with SAP NetWeaver gateway 2.0 SP4 are described in SAP Note 1731587
- General Constraints for Generic Channel: These apply to the Generic Channel specifically.
 - SOA/RPC generator constraints: these constraints apply to the SOA/RPC generator if it leverages the generic runtime.
 - screen scraping constraints: these constraints apply to the screen scraping generator if it leverages the generic runtime.
 - content: these constraints apply to some of the content that leverages the generic runtime.

General Constraints

The following constraints apply to SAP NetWeaver gateway as a whole.

- odata for sap (standard mode): the implementation of the odata protocol "odata for sap", provided with SAP NetWeaver gateway 2.0 SP4, has the following constraints.

SAP Note 1574568

Goal is to identify primary key(s) as quickly as possible and use them to fill entities.
